Shoring 285 Delaware, Buffalo, New York

Location:
Buffalo, New York

Client:
Uniland Development,
Inc.

Client Contact:
Mr. Jeff Hayes
(716) 834-5000

Excavation with Shoring Walls Constructed Looking South

MMCE prepared shoring design plans for the basement excavation for this five story office building in Downtown Buffalo. The shoring system consisted of a cantilevered soldier pile and lagging wall, 16 to 18 feet high.

MMCE worked closely with the contractor to develop a cantilever design. This created a clear excavation for foundation construction and obviated the need for easements from adjacent property owners that would have been required for an anchored wall.
